2. Research Activities

2.1 Major Achievements

Founder of UoN Chair of Oman's Medicinal Plants and Marine Natural Products, now known as Natural and Medical Sciences Research Center (NMSRC) with a budget = 9,748,992.36 USD

The University of Nizwa (UoN) envisioned this chair and drew necessary implementation plans that emphasized dynamic sequential implementations and both internal as well as external funding. As a consequence, the UoN built and furnished required research facilities and labs, recruited highly qualified researchers, and capitalized effectively on its international networks.

The University of Nizwa has created this chair as a vital vehicle in delivering its research strategy's objectives among other means including research teams and research centers. This chair shall focus on medicinal plants and marine natural products. Accordingly, it has been named University of Nizwa Chair on Oman's Medicinal Plants and Marine Natural Products. Indeed, it comes as a direct response to the research strategy of the Sultanate of Oman that aims at creating an innovation culture where capacities are being built, collaboration and networking among researchers, scholars and institutions are being forged, and where innovation outcomes are transformed toward social economic growth. This new Chair embodies all those noble objectives.

This five-year Programme is set to further build on Omani excellence in the chemistry, pharmacognesy and pharmacology of medicinal plants and marine natural products of Oman. All of which are of immense economic potentials. No doubt, this chair will boost knowledge transfer, enhance Omani human resource building, and strengthen scientific bridging between Oman and other countries. The chair shall cater to various needs of the country in basic as well as applied and specialized areas of natural products research and education related to the chair scope of activities.

Oman is endowed with rich biodiversity both marine and terrestrial that has acclimated to the arid climate. Its agro systems both traditional and conventional encompasses a wide range of crops including herbs, vegetables, fruits, grains, and forges. Its mountains, villages, valleys, and coastline are alive with indigenous plants, animals, and species. This chair is pioneered by devoted researchers. Located at the University of Nizwa, our scientists enjoy tremendous opportunities of investigating numerous species growing in Jabel Al-Akhdar as well as other parts of Oman. Under the umbrella of the UoN Chair of Oman's Medicinal Plants and Marine Natural Products we are discovering lead compounds from medicinal plants as well as marine species of Oman by isolation through chromatographic techniques including CC and preparative HPLC followed by extensive spectroscopic analyses using 1D and 2D NMR, IR, MS and when possible, through X-ray diffraction analysis. Our research activities also include microbiology, pharmacology, and molecular biology research. We are also interested on drugs for cancer therapy. In addition, we are involved on remediation of heavy metals contamination in Oman using extremophilic endophytes. Our recent research topic focuses on plant DNA barcoding.

National Chair in Materials Science and Metallurgy with a budget = 13,319,320.80 USD in Collaboration with the University of Cambridge

This proposal for the creation of a Chair in Materials Science and Metallurgy at the University of Nizwa comes in response to the research strategy of the Sultanate of Oman that aims at creating an innovation culture where capacities are being built, collaboration and networking among researchers, scholars and institutions are being forged, and where innovation outcomes are transformed toward social economic growth. This new Chair embodies all those noble objectives. The creation of the Chair as a joint effort between the University of Nizwa and the University of Cambridge comes as an appreciation of His Majesty Sultan Qaboos bin Saeed endowed chair of Modern Arabic and His Majesty's endowed chair of Abrahamic Faiths and Shared Values at University of Cambridge. This joint initiative by the University of Nizwa and the Department of Materials Science and Metallurgy at the University of Cambridge in the United Kingdom, as a five-year program, is set to build further on Omani excellence in the development of Extractive Metallurgy, Electrometallurgy, and Energy Materials and Devices. All these possess immense economic potential. No doubt, this new Chair will boost knowledge transfer, enhance Omani human resource building, and strengthen scientific bridging between Oman and United Kingdom.
