موقع المكتب: 13-33

Teaching Philosophy

For me, teaching challenges for students include using various newer methods to bring the students down to the course basics. It includes developing a basic design approach without throwing their primary interest from the higher-levels of discussion. I found allowing topics of students interest in their assignments, improved their learning curves. I make use of examples and help motivate ideas by placing them in the background of their applications. My favorite is an interactive teaching style mixing lectures with problem sessions. This way the student's applicability towards the ideas they are learning .increases

Position: Lecturer

Qualification: Master of Pharmacy

Area of Specialization: Pharmaceutics

Research interest: My research interest lies in developing microspheres, solid dispersions and complexation products of API's. These formulation techniques provide a challenging recourse to some of .the issues faced by conventional drug delivery systems

(**Award:** i. Research Council Funding ~ 70,000 OMR/- (~182,000 \$

ii. Gold medal for the best poster in the Ministry of Health Conference
